

Summer Training Management System

Yazeed Alwehaibi
Abdulmalik Altwaijry

Ibrahim Almania
Azzam Alredini

Supervisor:
Dr. Ibrahim Sulaiman Alskiety

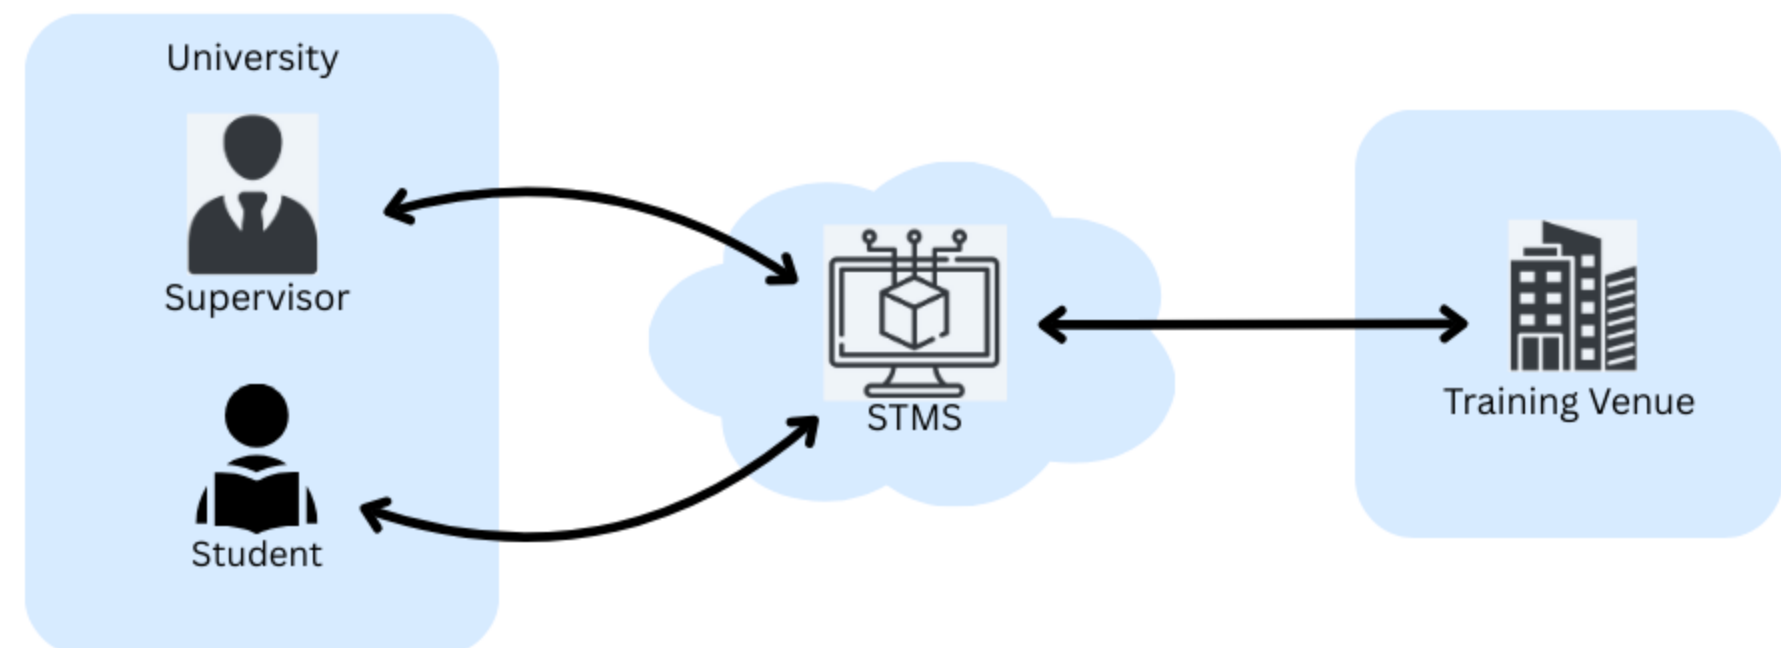

Computer Science Department, College of Computer, Qassim University

Problem Statement

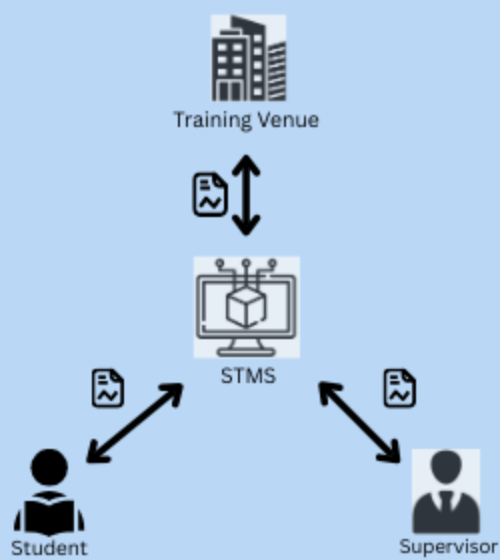

- Summer training is part of curriculums in most of the Academic institutions.
- The process is typically manual or spread across disconnected platforms
- This would lead to delays, miscommunication, and administrative burdens.
- There is a need for a centralized and structured approach to effectively manage all aspects of the summer training process.

STMS Overview

- The Summer Training Management System (STMS) was developed to streamline and unify the entire communication and workflow process of summer training.
- STMS improves both the efficiency and quality of the summer training experience, creating benefits for students, supervisors, and training venues alike

Centralized reports Management

Centralized reports

- Supervisors can access all student reports through a single, user-friendly platform

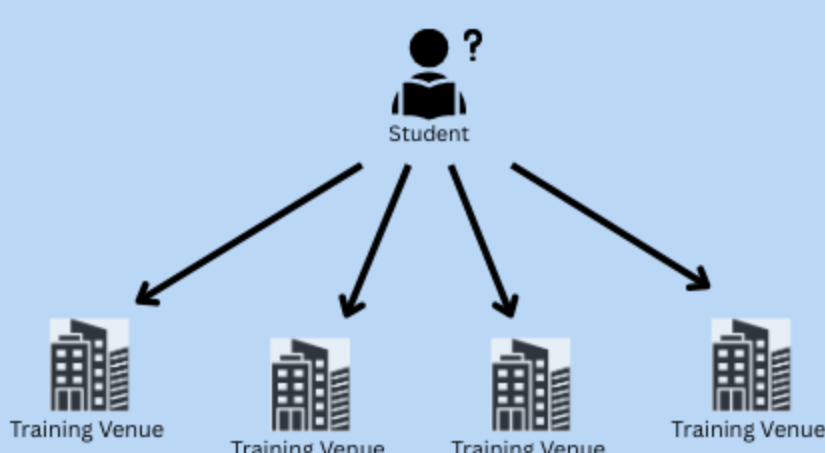

Training announcements

- Training venues can easily reach students by posting and promoting their training directly on the platform

Venue matching

- Students are matched with suitable training venues based on their preferences and feedback from previous participants

Venue Matching Tool
